

Are You Ready for BEEP?

STEP I

Ask if you are ready.

BEEP (Bi-layer Enhancement Enterprise Platform) is purpose-built open platform created with the community, industry, DoD, and warfighters in mind. Designed to perform a wide range of functions, BEEP uses a common interface to join disparate systems in a secure and efficient way.

- Looking to connect people to information, equipment, and the space around them?
- In need of a customizable digital solution?

STEP II

Decide how to proceed.

Deploy BEEP on-premises behind your own firewall, in the cloud, or a combination of both. Think about your options:

- **On-Premise:** Deploy locally behind the security of your own firewall
- **Cloud:** Deploy to managed cloud services for global access
- **Hybrid Approach:** Deploy a combination of on-premises and cloud with data synchronization

Not sure which approach is right for you? What are your security concerns? How much expertise do you have in-house?

STEP III

Get started today—consult an expert.

Boston Engineering is ready to help you determine your next steps and provide all the necessary resources to succeed. Start a conversation with a Digital Solutions expert today.
