

Are You Ready for Mixed Reality Expert Guidance?

STEP I

Ask if you are ready.

Mixed Reality Expert Guidance (MREG) provides real-time access to remote experts using AR technology, reducing the need for on-site visits and saving time and costs associated with dispatching technicians to the field. **Are you ready for MREG?**

- Experiencing downtime from lengthy repair delays or maintenance processes?
- Looking for an easier way to connect SMEs to field technicians?

STEP II

Decide how to proceed.

If your company's remote communication could be faster, more accurate, and less expensive, then you are ready for MREG! **Think about the next options:**

- Employ MREG with your existing tech **or**
- Engage Boston Engineering to design and plan your MREG approach, including technology selection and implementation.

Not sure which approach is right for you? How much time do you have? How much expertise do you want in-house? We offer two options to help:

- Build Expert Guidance skills and knowledge in-house. Boston Engineering can help you upgrade your software, get the right licenses and seats, and help you integrate MREG into your company.
- Partner with Boston Engineering to set up your team for success. We will integrate MREG software and provide training and consulting to your team throughout the process.

STEP III

Get started today—consult an expert.

Boston Engineering is ready to help you determine your next steps and provide all the necessary resources to succeed. Start a conversation with a Digital Solutions expert today.
